## 2.2. Others

- Note(1) a. Every dot herein means sub-pixel(Each Red, Green, Blue Color).  
b. Damaged less than half size of sub-pixel is not counted as defect.  
c. Extraneous substances which can be wiped out are not considered as defect.  
d. Defects which is on the Black Matrix(Outside of Active Area ) are not considered as defect.

### Note (2) Definition of Area

### Note (3) Bright dot defect definition

-bright area is more than 50% of one dot .All bright dot defect must be visible through 5% ND filter.

Note (9) "Average Diameter" description

$$\text{Average Diameter} = (a+b)/2$$

The defect that are not defined above and considered to be problem shall be reviewed and discussed by both parties.

Note (10) Bright dot, mura and leak are defined through transmission ND Filter as following.

Note (11) It doesn't matter whether silicon or EGC is used for frame spread, the product is always reliable.
